

Sellenis S-Jet 600

**The new, reliable, high speed range of Industrial digital printers
using the well tried, tested and trusted HP TJ2.5 technology
For all your on-line, live and hands-free Coding&Marking**

**A full range
of printer models to meet
your industrial digital printing
needs**

A full range of printers tailored to meet your various Coding, Marking & Product ID applications needs. With the S-Jet 600 series you do not have to compromise between what is on offer and your requirements. You choose the printer system that you need, not what is available...print images from a maximum of 12.5 mm using 1-pen printhead printer to 100 mm in height for an 8-pen system configuration.

You configure your printer as you wish from one to 4 pens combined in a single printhead or configured in groups of printheads to allow, for instance, for printing on different production lines using the same controller or for printing on different sides of, say a box, at the same time.

The S-Jet 600 Highly configurable. Offering versatility and flexibility

The **S-jet 600** series printers have been designed to give the flexibility to locate the whole system (controller and print module(s)) on-line, on the production line. Alternatively, the controller can be located off-line, away from the production line and the print module.

In this latter configuration, the set up and the printing is controlled from an office or an off-line where the controller is situated. Furthermore, the controller can be one of Sellenis' controllers or a PC incorporating Sellenis' S-Jet 600 series software.

The configuration shown here in the attached photo is that of an on-line configuration in which the whole printing system is located on or next to the production line. The printheads are connected to the controller by cables. The controller incorporates both the GUI and the Print Engine Driver Board.

On-line controller

Highly configurable. Offering versatility and flexibility

The S-jet 600 series printers have been designed to operate using sellenis dedicated controller or alternatively sellenis' controller software installed and running on your own PC or laptop. In any of these configurations the controller, your pc or laptop are simply connected to the Print Engine Interface system using a standard Ethernet cable. In any of these configurations, the Print Engine Interface system and the print module (s) will located near or on the production line but the controller, laptop or PC can, if necessary, be located far from the production line in an office somewhere in the factory or even in a different city or country altogether.

Off-line controller

Complete range of no mess coding & marking ink jet printers from 1 printhead up to 8 printheads module systems

Offering superior print quality at up to 600 dpi resolution of alphanumeric texts, variable data, barcodes, graphics and logos up to 100mm high at speeds of up to 5 m/s

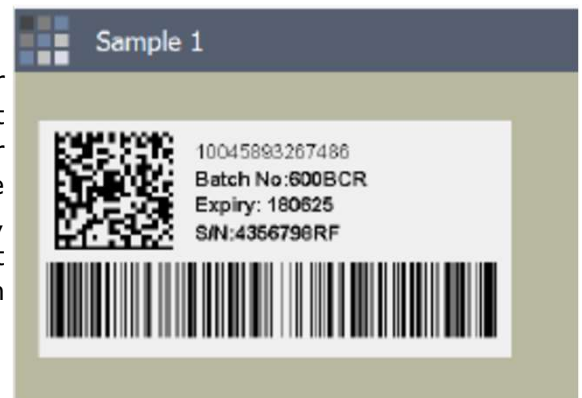

- **Economical**
- **Versatile**
- **Easy to use**
- **Optional vision system for print & verify; Track & Trace**
- **Easily integrated with existing systems**

Are you Serialisation ready?

With the S-Jet 600 you will be fully compliant with current and pending legislations

The S-Jet 600 series incorporates a powerful printer controller and associated software. This allows you to implement and meet the various health and safety legislations that are in force or pending introduction around the world. These legislations include the serialisation and the coding of medicines, cosmetics, cigarettes and other products to prevent dangerous counterfeit and diversion both for health and safety and brand protection purposes. Don't get caught unprepared, stay ahead.

These legislations are real, increasing and will force manufacturers to serialise their products to enable their traceability throughout the supply chain. Manufacturers can face fines or even be ordered to stop production if they do not comply. Sellenis controller software is serialisation ready. It incorporates powerful and secure serialisation that support GS1 data format and comply with FDA 21CFR part 11, and CIP

The S-Jet 600 series delivers high quality, 600 dpi barcodes ensuring 100% scan ability and readability every time. No failure, no error, no waste. The S-Jet600 comes with powerful serialisation ready software and offers a full range of 1D and 2D barcodes including QR code; Datamatrix; PDF 417; Databar; Aztec; Micro QR code and Micro PDF 417

A range of robust, durable high quality print modules

Extended connectivity

Coding, marking and product ID

Sellenis S-Jet 600 series

Versatility, flexibility, configurability and more...

Sellenis S-Jet 600 gives you

-more productivity-high uptime
-more print quality - up to 600 dpi
-more flexibility -print text, images, logos, 1D 2D barcodes, up to 100 mm high
-more applications including pharmacy, blister packs, cosmetics, cigarettes
-Higher throw distance up to 5mm
-more profit

Sellenis S-Jet 600 printer is the new gold standard for your high quality, secure, error free product coding, marking and auto ID jobs... no other ink jet printing technology can come even close.

Enabling you to apply correct codes; implement Serialisation to meet increasing track & trace legislations

Outstanding performance

A range of printers using a technology you can rely upon

- Resolution 600 x 600 dpi
- Print speed up to 150 m/min or 500 ft/min
- Print height up to 100 mm (4")
- Throw distance up to 5 mm
- Print on a wide variety of substrates- including plastics, metals, woods, carton boxes, aluminium and pharmaceutical blisters pack
- Practically maintenance free

Flexibility, expandability, simple to install; just plug it and run it

- Can print on metals, plastics, woods, flexible films, PVC, polypropylene, foil blister packs, pharmaceutical, medicine packaging, carton boxes, woods,
- Barcode, logos, texts, graphics up to 100 mm (4") high
- Track & trace with vision system
- Several printer system configurations to suit application

Unmatched TCO and environment friendly operation

- Practically maintenance free
- No ink mess, no printhead flushing, cleaning or dryingall these traditional ink jet , tedious operations are all gone
- No washdown down waste that you have to put up with using traditional ink jet ...With the S-Jet 600 TIJ all this waste becomes history. A thing of the past.
- No sticking of labels process and labour requirement – printing occurs on line at speed hence improved productivity
- No make-up consumption and no solvent evaporation -- - you help the environment and your reduce running costs
- No solvent recovery expenses (such as peltiers);
- No MEK vapour fume removal schemes and extra expense
- No more scheduled maintenance and associated expensive service contracts
- No hazardous materials or containers to handle, manage and dispose of

Powerful features for Product Identification, Serialisation & Track & Trace

- Touch screen user interface.
- Full sets of latest 1-D and 2-D barcodes for Track and Trace.
- Support for GS1 formatted data
- Multiple security level access.
- Compliance with FDA 21CFR part 11, CIP,
- Allows you to print unique PIN codes
- Implement secure Serialisation schemes to meet 21CFR part 11, CIP,
- Counters
- Shifts & batch codes
- Fully configurable text and images supported on a Windows Embedded platform.
- Variable data.
- Modular grouping of pens with independent configuration of orientation and printed image length.
- High performance image compilation (raster Image Processor - RIP)

Easy, expandable integration

Communication interface:

- USB 2;
- 100/10M Ethernet;
- or 100M WiFi Ethernet;

Machine External Interface port:

- 2X photocell;
- 2x Shaft Encoder;
- 2x Relay port drive 4 Relay;
- 2x Lamp Beacon ports;
- 2x Camera Port or Photocell loop back port;

Print Head drive interface;

- 4x independent print head interface port
- 8x independent print head interface port

Applications:

- Coding & Marking
- Serialisation and Track & Trace
- Product ID
- Medicines , pharmaceuticals packaging (primary, secondary, tertiary)
- Cigarettes
- Cosmetics

Print specifications		
Quality		
Technology		HP TIJ 2.5 Thermal Ink Jet
Vertical resolution		300 or 600 dpi
Horizontal Resolution		150, 200, 300, 450, 600 dpi
Fonts		Multiple fonts
Colour		Monochrome
Print speeds (dependent on horizontal print resolution)		
m/min	m/s	ft/min
38	0.6	120
52	0.85	170
78	1.3	260
116	1.9	380
155	2.5	520
306	5.1	1020
Print Features		
Throw distance	Up to 5 mm	
Print coverage	Up to 100 mm high	
Fixed and variable barcodes		
1D Barcodes	A full, comprehensive list of 1D barcodes	
2D Barcode	QR code; Datamatrix; PDF 417; Databar; Aztec; Micro QR code; Micro PDF 417	
Support full GS1 format data	Yes	
Graphics & Logos	Yes	
Variable data		
Numeric serialisers	Yes	
Date and time stamps	Yes	
Shift codes	Yes	
User codes	Yes	
Substrates		
Porous – absorbent	Yes	
Non porous – non absorbent	Yes	
Coated	Yes	
Non-coated	Yes	
Paper	Yes	
Plastics	Yes	
Metals	Yes	
Pharmacy blister packs	Yes	
Woods	Yes	

Connectivity	
Controller Windows 7 or 8 Import , export data via USB devices or Ethernet Touch screen GUI Or keyboard/Mouse	Communication interfaces: USB 2; 100/10M Ethernet; or 100M WiFi Ethernet
Machine External Interface port: 2x Photocell; 2x Shaft Encoder; 2x Relay port drive 4 Relay; 2x Lamp Beacon ports; 2x Camera Port or Photocell loop back port	Print Head drive interface; 4x independent print head interface port 8x independent print head interface port
Production lines Can print simultaneously on 2 independent production lines	

Accessories
Photo-cell Retro-reflective assy
Lamp stack assy Lights only
